## Icons You'll See Throughout Your Log Book...

Steps you should undertake to be safe and legally compliant.

Handy and practical ways to improve your building's safety.

Interesting facts (you probably didn't know) about fire and security.

# Your Annual Fire & Security Systems Log Book

## Your Log Book Explained

This fire and security log book is designed as an aid to help you record legally required data logs. Your log book is designed to last you for one year, including space for your maintenance visits and periodical testing.

UK Fire Safety Law recommends testing your fire safety equipment, and training your staff to stay safe and legal. Accurately recorded information should be kept, ensuring appropriate steps are taken.

Keep your log book safe to log weekly tests or any faults that arise that need to be investigated by your maintenance provider. Your WFP engineer will also use this to log service visits, so make sure to keep it in an accessible location on-site – preferably near the fire alarm panel. It's your responsibility to provide this log to the engineer.

Within each section, you'll see the tasks required for each of your fire and security products and systems. Some of these tasks must be reserved for a competent specialist and maintenance provider, but there are certain duties which need to be carried out by you/designated staff members. We've made it super simple for you to know what your responsibilities are and how often you need to fulfil them.

The advice given in this log book is based upon an interpretation of the British Standards, which is regularly updated, and we endeavour to keep this up-to-date. However, the information within the log book does not substitute a Fire Risk Assessment; this should be carried out and referred to in conjunction with the testing schedule in this log book.

If you have any questions about what you're required to do, call our team on **01277 724 954**.

## Our Promise to You...

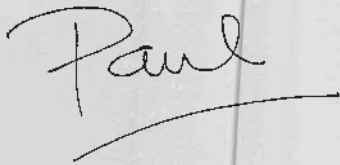

Helping you to negotiate safety system maintenance is paramount to us. You need a team you can trust 24/7, and we promise to be there for you. Plus, because we care about making your life easier; you can take advantage of a range of benefits and business management tools we provide. Turn to page 47 to see what these are and get in touch if you have any questions.

## Back Story...

Back in 2003, following a career in the Royal Navy and then in the fire industry as a fire alarm engineer, I founded WFP. Honest advice, excellent customer service and reliable engineering are the hallmarks of the WFP ethos, and we're proud to be working with customers like you and delivering on that promise.

Your log book is designed to help you keep your maintenance and servicing details up-to-date. I hope you'll find it useful and insightful and if you have any suggestions for making it even better, then feel free to let us know.

Sincerely yours,

**Paul Field**  
Founder & Managing Director

## Duties of the Responsible Person

The Responsible Person (RP) is the building owner or the person in control of the day-to-day operations of the building, and must manage any fire risks on the premises. In order to identify the risks posed within your building, a Fire Risk Assessment must be carried out to evaluate your premises and identify any issues to be addressed for both safety and legal compliance.

It is a legal requirement to have a Fire Risk Assessment carried out at any commercial premises with 5 or more users, including both customers and employees. It is recommended in the

Regulatory Reform (Fire Safety) Order that an assessment is carried out annually and immediately following any refurbishments or building extensions. Having an up-to-date Fire Risk Assessment is a vital aspect of your building's fire safety strategy. If it's been too long since your last one, call us to get it booked in on **01277 724 954**.

If you are found to not have a written record of your assessment, or not to have carried out essential works detailed in the assessment, you could incur a fine, or further prosecution.

## Fire Risk Assessment Carried Out:

| Date/Time of Assessment | Carried Out By | Compulsory Changes | Recommended Changes | WFP Notified? |
|-------------------------|----------------|--------------------|---------------------|---------------|
|                         |                |                    |                     |               |
|                         |                |                    |                     |               |

| Date | Changes Made |
|------|--------------|
|      |              |
|      |              |
|      |              |
|      |              |
|      |              |
|      |              |
|      |              |
|      |              |
|      |              |

 **As a maintenance customer, you're entitled to a free survey and design should you need a new alarm installation.**
